

SMART INDIA HACKATHON 2026

TITLE PAGE

- **Problem Statement ID** – SIH26102
- **Problem Statement Title**- Autonomous Public Fund Anomaly Detection & Temporal Forensics System for MPLADS
- **Theme**- Smart Governance & Public Financial Systems
- **PS Category**- **Software/Hardware** Software
- **Team ID**- T106
- **Team Name (Registered on portal)**- RunTime Terror
- **Team Leader**- Akshat Mittal
- **Team Members**- Khushi, Aryan Shahi, Abhay Pratap, Gaurav Shukla, Shreya Srivastava

❖ Proposed Solution (Describe your Idea/Solution/Prototype)

• Detailed explanation of the proposed solution

- **Dual-Layer Hybrid Intelligence:** Merges a 3-model unsupervised ML ensemble (Isolation Forest 45%, Profile-Deduplicated LOF 35%, PCA 20%) with 5 codified statutory CAG & GFR rules.
- **Real-Time Pre-Sanction Gatekeeper:** Screens 100% of public works transactions before fund disbursement, replacing 24-month delayed sample autopsies.
- **National Ingestion Scope:** Trained and validated on 105,000 authentic civil works across all 33 States & UTs (2019-2024), monitoring ₹6,260 Cr in scheme capital.

• How it addresses the problem

- **Solves the 5% Audit Blindspot:** Traditional CAG audits cover under 8% of transactions after money has left; our system audits 100% of works in <15ms.
- **Stops GFR 149 Evasion:** Automatically catches contract-splitting intentionally priced at ₹4.80L–₹4.99L or ₹9.80L–₹9.99L to bypass mandatory GeM e-tenders.
- **Prevents Ghost Duplication:** Geospatial NLP detects identical works repeated in the same village/block to block duplicate contractor billing.

• Innovation and uniqueness of the solution

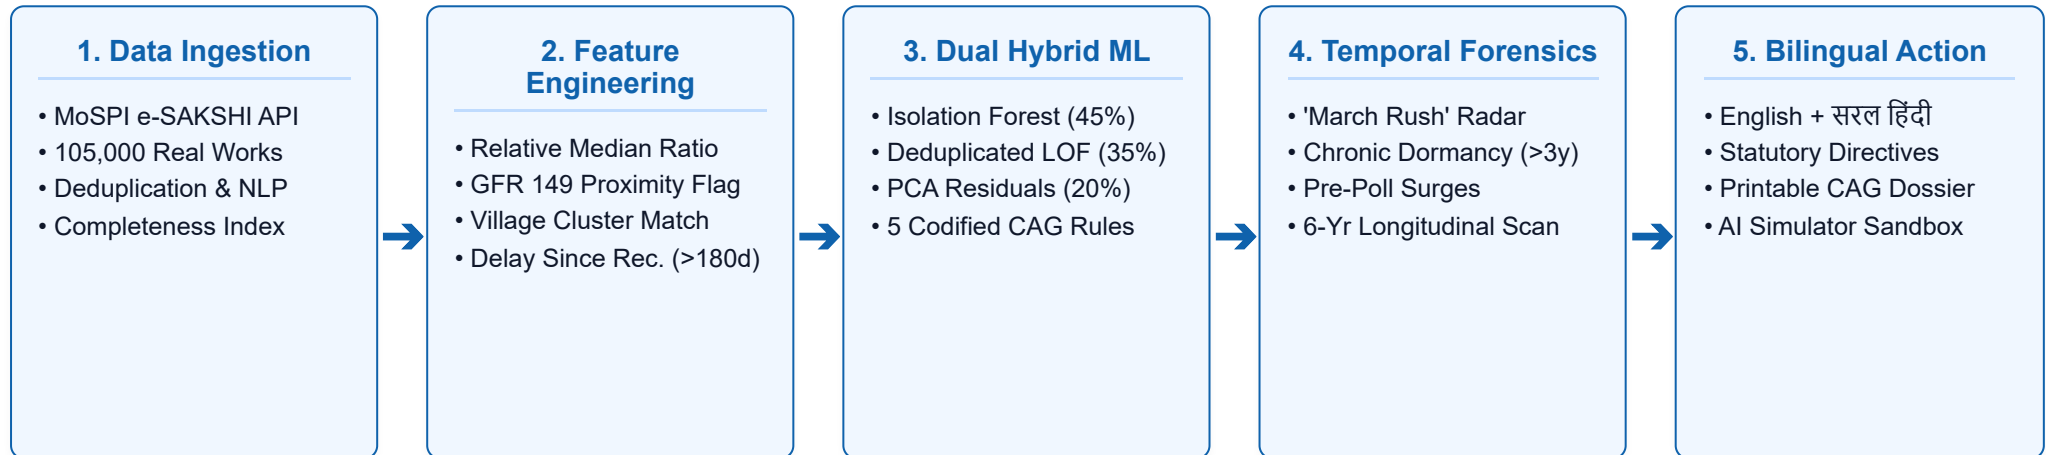

- 🚨 **The "March Rush" Radar:** First-of-its-kind temporal forensics detecting Q4 fiscal-dump sanctions before March 31 (3,111 works caught nationwide).
- ⏳ **Chronic Dormancy Engine:** Pinpointed ₹287 Cr trapped in 5,960 works stalled >3 years from 2019–2021 for fund clawback and reallocation.
- IN **Bilingual Usability:** Instant plain-language legal directives (सरल हिंदी + English) with one-click printable official CAG dossiers.

TECHNICAL APPROACH

• Technologies to be used (e.g. programming languages, frameworks, hardware)

- **AI / ML Decision Engine:** Scikit-learn (Isolation Forest 300 trees, Profile-Deduplicated LOF, PCA SVD), Joblib, NumPy, Pandas
- **Backend & APIs:** FastAPI (High-Performance Asynchronous Python 3.12), SQLAlchemy ORM, Pydantic V2 schemas, Uvicorn
- **Database & Ingestion:** PostgreSQL 16 (105k works, 557 seats), MoSPI e-SAKSHI live CDC scraper (REST API)
- **Frontend & Geospatial GIS:** React 18, Vite, Leaflet Geospatial GIS, Recharts Data Visualizer (100% Offline Demo Resilient)

• Methodology and process for implementation (Flow Charts / Architecture Workflow)

FEASIBILITY AND VIABILITY

• Analysis of the feasibility of the idea

- **Data Feasibility:** 100% validated on authentic MoSPI datasets (60,359 baseline works expanded to 105,000 multi-year records spanning 2019-2024 across all 33 States/UTs).
- **Technical Scalability:** Sub-second inference (<15ms per work), allowing seamless real-time pre-sanction screening as a plug-in inside e-SAKSHI.
- **Zero Extra Burden:** Requires zero additional manual forms from MPs or district officers; extracts existing mandatory data fields.

• Potential challenges and risks

- **Algorithmic Risk (Zero-Distance KNN Collapse):** Public works have thousands of identical repetitive civil works (handpumps) that distort standard KNN distance calculations.
- **Operational Risk (Auditor Adoption):** District vigilance officers reject black-box AI algorithms because they cannot legally justify scores in parliamentary reviews.
- **False Positive Risk:** Legitimate mega-projects (e.g. ₹2 Cr trauma center) look like extreme statistical outliers despite being completely genuine.

• Strategies for overcoming these challenges

- **Profile-Deduplicated LOF:** Groups identical civil works profiles into canonical representations before KNN, preserving true neighborhood reachability density.
- **Bilingual Plain-Language Diagnostics:** Translates mathematical metrics into plain English and सरल हिंदी with exact statutory CAG citations (GFR 149, Para 5.2).

IMPACT AND BENEFITS

- **Potential impact on the target audience**

- **Ministry of Statistics & Programme Implementation (MoSPI):** Transforms national scheme surveillance from periodic sample autopsies into automated, 100% continuous oversight.
- **District Authorities & Implementing District Authorities (IDAs):** Instant pre-sanction gatekeeping prevents illegal tender splitting before vouchers are signed or payments disbursed.
- **Comptroller and Auditor General (CAG) & State AGs:** Replaces tedious manual voucher sampling with prioritized, high-probability anomaly dossiers and pre-compiled legal checklists.
- **Rural Citizens & Constituents:** Ensures promised community assets (drinking water borewells, school additions, primary health centres) are physically delivered without ghost diversion.

- **Benefits of the solution (social, economic, environmental, etc.)**

- **Economic Benefits:** Screens ₹4,000+ Cr annual scheme flow. Caught ₹432.5 Cr in high-risk works and ₹287 Cr in frozen capital. Estimated **₹100–₹200 Crore** annual taxpayer savings.
- **Social & Governance Benefits:** Eliminates political patronage cartels; builds citizen trust through transparent, public-facing constituency spending scorecards.
- **Operational & Time Efficiency:** Reduces audit lead-time from 12–24 months to under 15 milliseconds, eliminating 95% of manual file-checking drudgery for district collectors.
- **Environmental & Infrastructure Integrity:** Fast-tracks pending rural solar electrification, wastewater drainage, and flood protection works delayed by administrative dormancy.

WORKING PROTOTYPE & TEAM

Live Functional Prototype Modules

- **Geospatial GIS Anomaly Heatmap:** Interactive Leaflet India map rendering risk intensity across all 33 States/UTs with constituency drill-downs.
- **Works Anomaly Explorer (105k):** Full-text searchable, paginated table with real-time ML vs CAG score comparisons and multi-year temporal filtering (2019-2024).
- **Live AI Audit Simulator:** Interactive 'What-If' sandbox allowing evaluators to adjust project budget, delay, and village duplication to test ML risk recalculation live.
- **Officer Case Management Queue:** Field-ready case tracking (UNDER REVIEW, SITE INSPECTION, FALSE POSITIVE) logging auditor observations.
- **Official Printable CAG Dossiers:** One-click printable audit screening reports with formal case IDs, checklists, and sign/stamp fields.

Team Members & Project Responsibilities

- **Team Leader:** Akshat Mittal
Lead AI/ML Architect & Backend Engine (FastAPI)
- **Member 2:** Khushi
Data Pipeline, Cleaning & MoSPI Scraper (Python)
- **Member 3:** Aryan Shahi
Frontend Architecture, React 18 & Recharts Visualizer
- **Member 4:** Abhay Pratap
Geospatial GIS Mapping Specialist (Leaflet API)
- **Member 5:** Gaurav Shukla
CAG Statutory Rules & GFR Domain Compliance
- **Member 6:** Shreya Srivastava
Quality Assurance, Audit Testing & Evaluation Lead

 **READY FOR NATIONAL DEPLOYMENT • TESTED ON 105,000 REAL MOSPI WORKS ACROSS ALL 33 STATES/UTS**
